

AUSTRALIAN MULTI-SCREEN REPORT

TRENDS IN VIDEO VIEWERSHIP BEYOND
CONVENTIONAL TELEVISION SETS

**QUARTER 2
2013**

VIDEO CONTENT ACROSS MULTIPLE SCREENS

The latest edition of the Australian Multi-Screen Report (Q2 2013) shows continued uptake of screen types, with tablets now present in a third of homes and almost two thirds of people 16+ having a smart phone.

This is providing Australians with additional options to consume broadcast television and other video. Australians spend on average 96 hours and 37 minutes per month watching TV on a conventional set. Viewing of video on a PC/laptop is at 6 hours and 26 minutes per month, followed by mobile phones (1:20) and tablets (0:50).

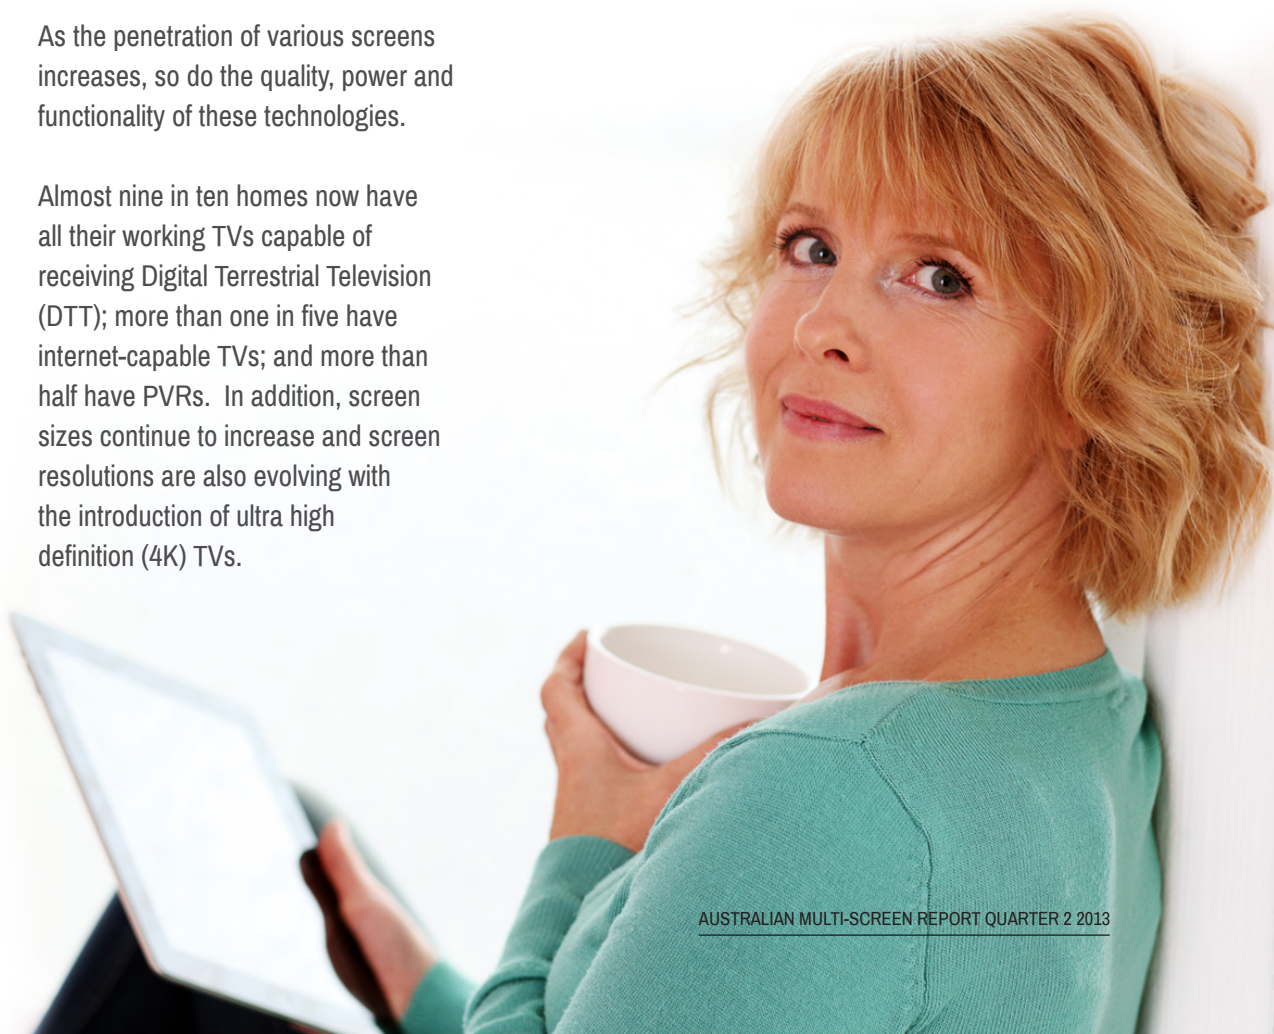

As the penetration of various screens increases, so do the quality, power and functionality of these technologies.

Almost nine in ten homes now have all their working TVs capable of receiving Digital Terrestrial Television (DTT); more than one in five have internet-capable TVs; and more than half have PVRs. In addition, screen sizes continue to increase and screen resolutions are also evolving with the introduction of ultra high definition (4K) TVs.

Just over three years ago, tablet computers launched in Australia and are now available from a range of manufacturers, in a variety of sizes, capabilities and screen resolutions.

Of course, the tablet followed the introduction of touch screen smart phones by only a few years.

The latest generation smart phones have dramatically enhanced power, screen size, resolution and capabilities; larger screen size in particular is starting to blur the line between smart phone and tablet.

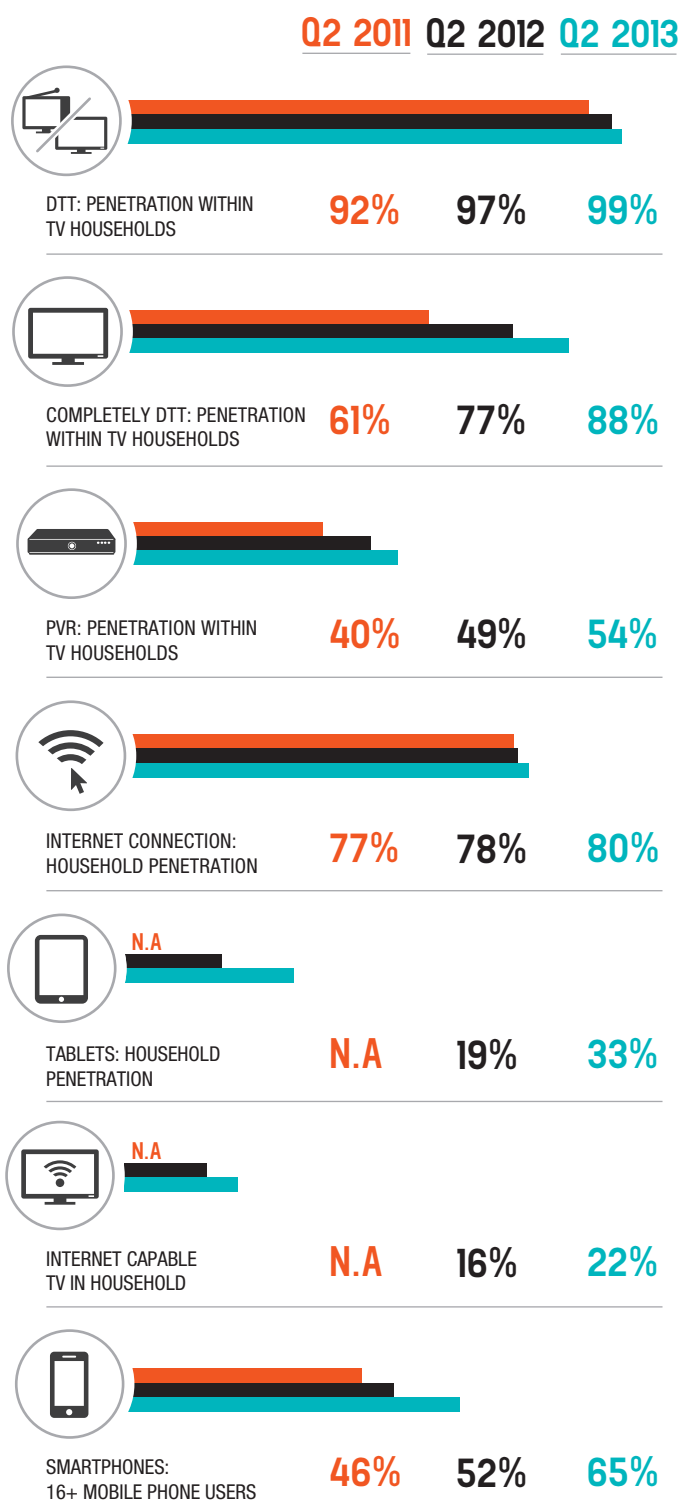

USING MULTIPLE SCREENS

A year ago (Q2 2012) the Australian Multi-Screen Report illustrated the reach of traditional television and online video viewing, both of which peak during the traditional evening 'prime time'.

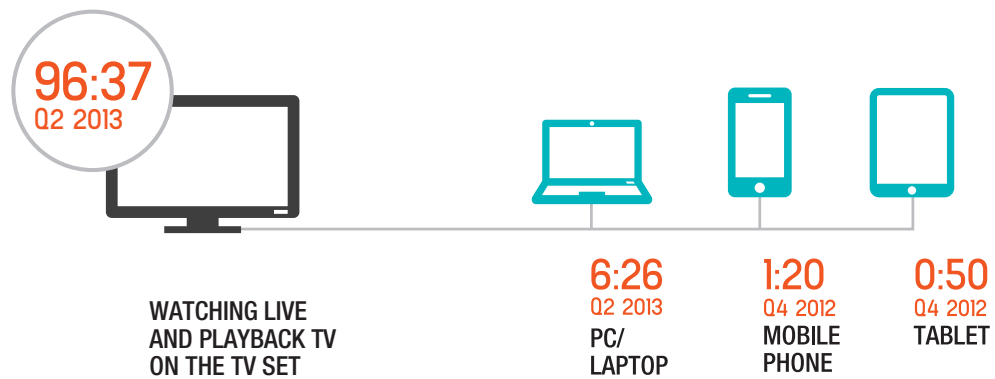

This report provides a first look at the average 'shape of the day' for Total Television Use. The chart highlights the levels of screen activity being done throughout the day, whether this is Live viewing, Playback viewing (within seven days of broadcast) or other TV screen use activity.

TECHNOLOGY PENETRATION

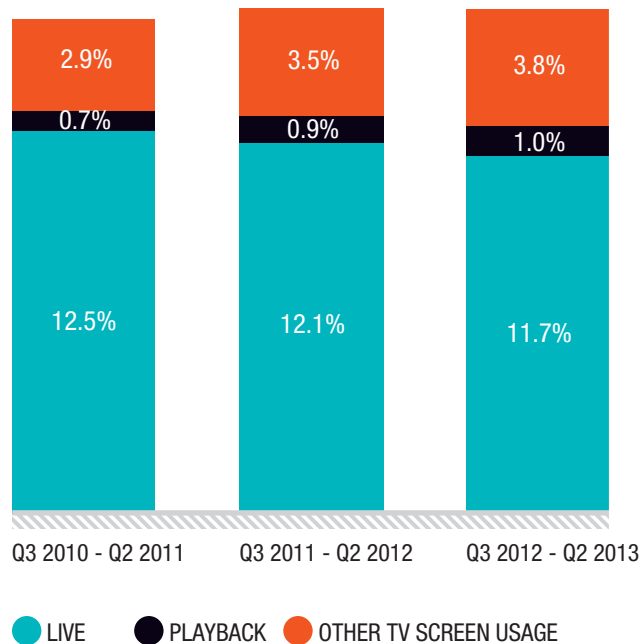

VIDEO VIEWING, AVERAGE TIME SPENT PER MONTH, TV / PC / MOBILE PHONE / TABLET

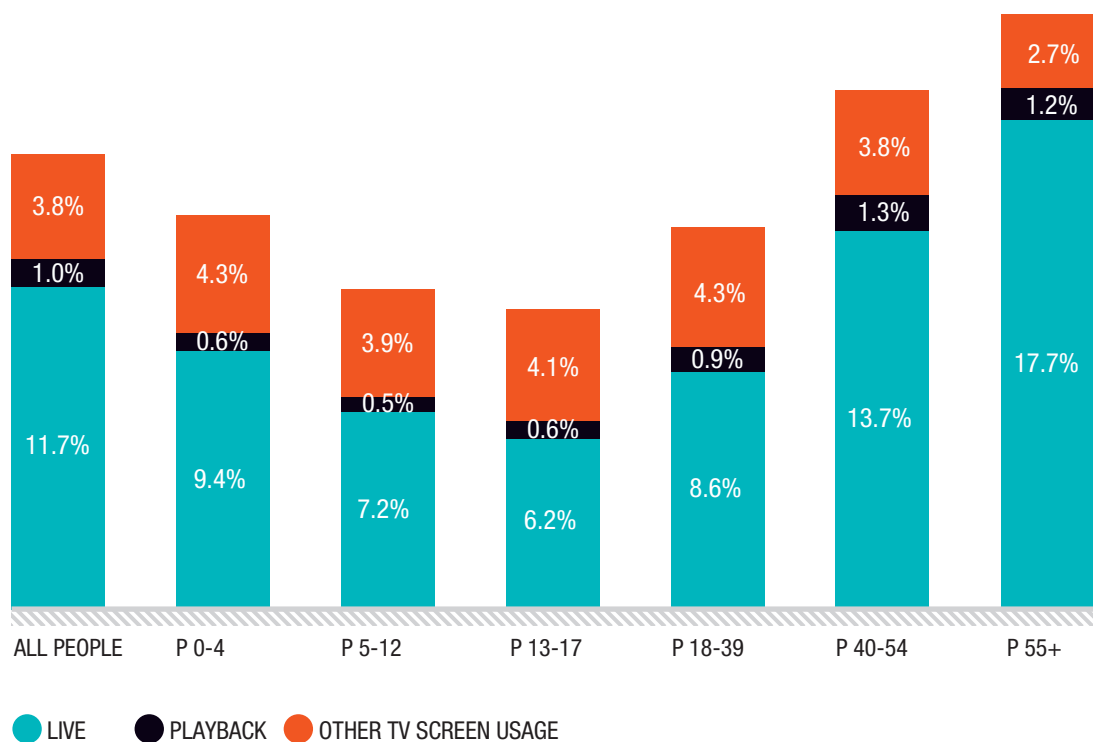

TOTAL TV SCREEN USAGE

TARP - TOTAL INDIVIDUALS

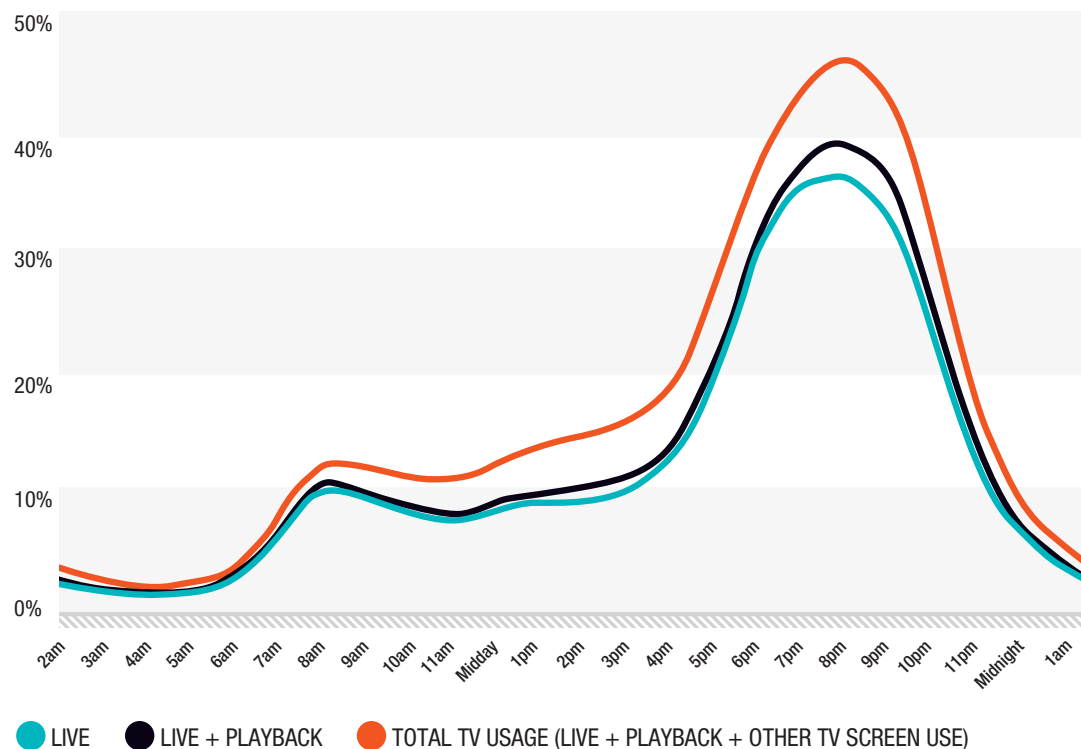

TARP BY DEMOGRAPHICS - Q3 2012 TO Q2 2013

TOTAL TV SCREEN USAGE - SHAPE OF THE DAY

////// TARP - ALL WEEK (SUNDAY TO SATURDAY)

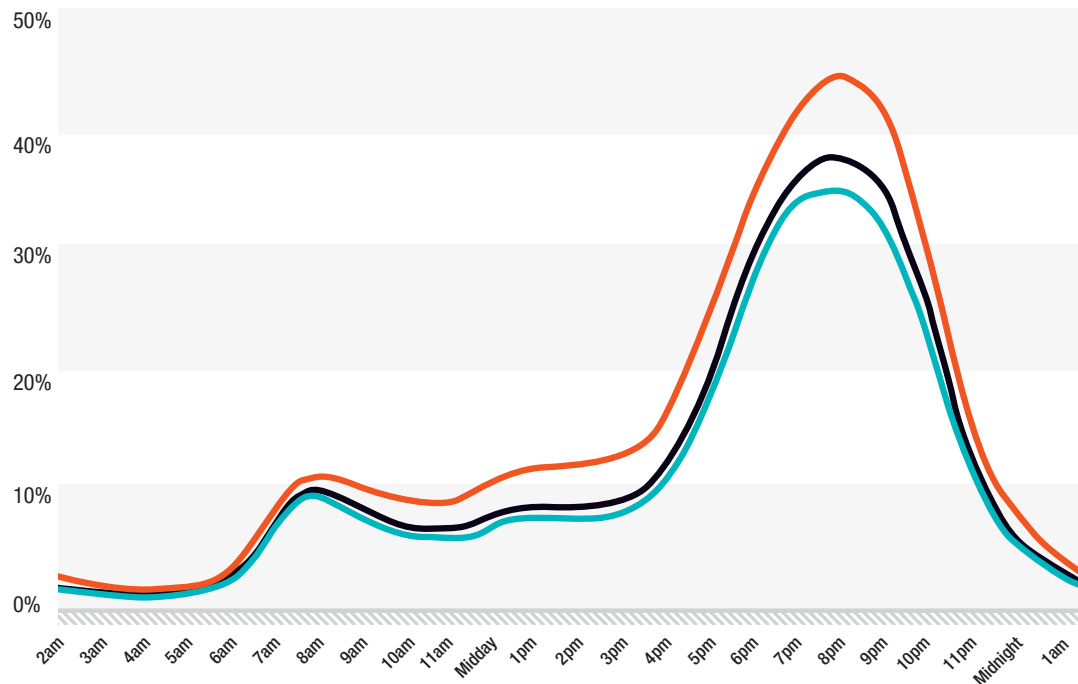

While overall Total TV Usage averages out at 16.5 TARP across the whole day, as we can see in the above chart (based on Period 7 2013) television use builds through the day to the evening peak.

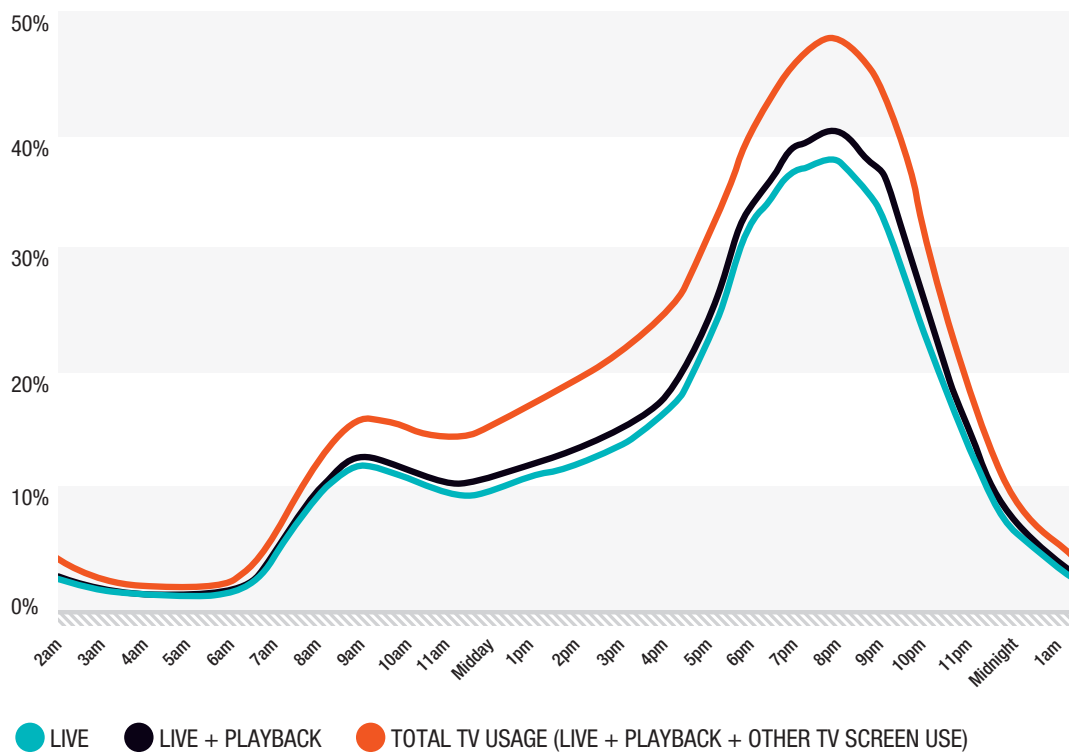

Playback viewing and Other TV screen use (e.g. using the TV for non-broadcast viewing purposes such as browsing the internet, watching DVDs, gaming, or playing back recorded broadcast content beyond the seven-day Consolidated viewing window) rises steadily through the day to the prime time period, with Live viewing driving the shape of early morning TV use in particular.

TARP - WEEKDAY

TARP - WEEKEND

Total TV Use peaks during the evening on both the weekdays and the weekend. However, weekends from mornings onwards

have a higher level of Total TV Use across the day relative to weekdays, including a larger amount of Other TV screen usage.

KEY OBSERVATIONS

TABLE 1: TECHNOLOGY PENETRATION

	Q2 2012	Q3 2012	Q4 2012	Q1 2013	Q2 2013
Digital terrestrial television (DTT): Penetration within TV households ¹	97%	97%	98%	98%	99%
Completely DTT: Penetration within TV households (Homes capable of receiving DTT on each working TV within the home)	77%	79%	81%	84%	88%
Personal video recorder (PVR): Penetration within TV households	49%	50%	52%	53%	54%

EXPLANATORY NOTES

- Panel install incidence rates for DTT and PVR are based on combined OzTAM Metro and Regional TAM panels as at last date of each period (Q1=end of P4, Q2=end of P7, Q3=end of P10, Q4=end of P13).
- Quarterly Establishment Survey waves are conducted within standard calendar quarters.
- National Establishment Survey (ES) estimates are based on combined OzTAM Metro and Regional TAM quarterly waves. Quarterly ES waves are conducted within standard calendar quarters.
- Playback mode is defined as television broadcast content recorded and viewed (played back) within seven days of the original broadcast time.
- Other screen usage is TV screen usage that excludes live and playback viewing of broadcast television within seven days of the original broadcast time. It can include non-broadcast activities such as gaming, online activity on the TV screen and playback viewing outside of the seven-day consolidation window.
- Average time spent viewing (ATV) is calculated as the daily average time (0200-2600) within the universe across all days in the calendar quarter multiplied by the factor of numbers of days in the quarter divided by three (3).
- Monthly reach for TV is based on the average of the calendar month cumulative reach audience (0200-2600) within the quarter.
- Video content is defined as a stream where both audio and video are detected. Video viewership excludes adult and advertising content, as well as downloaded content.
- Wherever possible, geographic and demographic data have been matched

for like comparisons.

- Nielsen Australian Connected Consumer report (ACC) based on online national population aged 16+.
- Mobile phone ownership and usage sourced from Nielsen Consumer & Media View (people 14+)
- PVR Penetration within TV households in Table 1 is based on install levels from the Combined OzTAM Metro and Regional TAM panels as at the last date of each period.
- TAM data defines 'Kids' as panel members aged 0-12, 'Teens' aged 13-17 and 'Male' / 'Female' as total individuals aged 0+
- Nielsen Netview defines 'Kids' as panel members aged 2-11, 'Teens' aged 12-17 and 'Male' / 'Female' as individuals aged 2+
- Nielsen Australian Connected Consumer report defines 'Teens' as respondents aged 16-17 and 'Male' / 'Female' respondents aged 16+
- Nielsen has implemented page crediting improvements in the measurement of web pages and time spent across all online activities, driving a trend break for May 2013 data onwards for time spent online. As part of these improvements, the previous metric of 'PC time spent' has been retired and the new metric of 'online time spent' will be used going forward. Online time spent is inclusive of all online activities including PC applications (e.g. iTunes, Skype etc).
